Changes since last release

Note: These changes apply to the keeptrak site and the MrOS Online public website. New datasets are on keeptrak only for at least a year(1 year embargo). Changes made to datasets mostly apply to older data already posted publically, but may apply to datasets still under the 1 year embargo.

NEW DATASETS:

Baseline

OX4AUG19: Oxylipin metabolites at Visit 4 from Jack Weidricks Ancillary

The following changes have been made to previously released datasets. Please see the information files for the specific datasets for more information.

Visit 4

B4JUN19: Some of the V4 whole body measures in this release have changed for Palo Alto and San Diego participants that were scanned during the last 18 months of Visit 4. The whole body BMD and BMC measures for 208 Palo Alto participants have changed due to the fact that four longitudinal corrections for BMD and BMC were not applied in previous releases of the Visit 4 dataset. The Percent Fat, Fat, Lean, and Fat Free Mass measures for 262 San Diego participants have changed due to the fact these measures were mistakenly corrected through the end of Visit 4 rather than being corrected just through the end of October 2014; these measures did not require correction after October 2014. The whole body data for these participants is correct in the June 2019 dataset.

V4AUG19: Participant MN2363 had their MIWHYN variable corrected

Endpoints

FAAUG19: Additional fracture events were added to the fracture file.

Non hip variables were added NHP MOF non hip were added, MON

CDAUG19: X new variables were added to further subclassify stroke events, per Sara Rostanski's ancillary study #207 on Sleep Apnea and Ischemic strokes.

(AS OF FEB19 – I DON'T THINK WE HAVE A SUBMITTED ROSTANSKI MANUSCRIPT. THIS IS ANCILLARY #207. Asked Liezl 2/1/19

- **PCAUG19:** Since outstanding questionnaires are constantly being submitted to the data system, most of the PC variables have been updated (i.e. participants with variables previously set to .A:Missing now have values for those records.) Additionally, the dataset now includes information through the 57th tri-annual questionnaire mailing with a mail date of March 1st, 2019.
- **EFAUG19:** Participant status and follow-up times are updated with each release.
