The MrOS Visit 3 Enrollment Form should be completed for all participants that are contacted for Visit 3. At the end of visit 3 recruitment, all MrOS participants that are still active in the study should have an enrollment form on file. An enrollment form will not be expected for participants that died or terminated before being contacted for visit 3. However, if the participant completes any part of the visit or refuses to participate in the visit prior to death or termination, the Visit 3 enrollment form should be completed and submitted to the data system.

Q1. Type of Visit for V3.

Please mark the type of visit a participant had for the third clinic visit. Use the following as a guide:

Clinic visit only	Should be marked when the participant was only seen in the clinic.
Home visit	Should be marked when the participant was seen in their home. This includes when all measures were completed in the home or when some measures were completed in the home and others completed in the clinic.
SAQ Only	Should be marked when the participant is only willing to complete the SAQ (or any part of the SAQ).
Refused	Should be marked only when the participant refuses to complete any part of Visit 3.

Home Visits

In order to differentiate when some measures were obtained in the home and some are obtained in the clinic for a given participant, we would like sites to record what measures were obtained in the clinic. If the participant did not complete any part of a clinic visit and <u>all measures were obtained in the HOME</u>, mark the first 'all measures obtained in the home' bubble. However, if the participant completes some measures in the clinic and others in the home, please indicate which measures <u>were obtained in the CLINIC</u> on the Enrollment Form. For all other measures that are not marked, it will be assumed that it was obtained in the clinic if data is available on the clinic TELEforms. (Please note that the clinic interview includes pages 1-5 of the clinic set, not just those pages labeled clinic interview.)

The date that the participant was seen in their home should also be recorded.

SAQ Only and Refusals

For those participants that are SAQ onlys or refuse to participate in any part of visit 3, please record the reason for refusing a clinic/home visit or refusing to

participate all together. Only one option can be marked. Please mark the option that best fits the reason for refusal.

Q2. Date of Clinic Visit or Date SAQ was returned.

Please enter the date of the clinic visit or date the SAQ was returned.

- If a participant only had a home visit (and were never seen in the clinic), please leave this question blank. Only fill in the home visit date as part of the sub-question to Q1.
- If the participant was seen in the home and in the clinic, please fill the date the participant was seen in the clinic in Q2. Also, be sure to record the home visit date as part of the sub-question to Q1.
- If the participant was an SAQ only, please record the date the SAQ was returned to the clinic.

Q3. Who completed the self-administered questionnaire?

This question should be answered so that it reflects who provided the majority of answers in the self-administered questionnaire. In cases where questions are read to the participant so that the participant is answering the questions but a spouse, family member or clinic staff person is filling in the bubbles, question 3 should still be marked as the participant completed the questionnaire. Only when the majority of questions are actually answered by someone other than the participant should the other bubbles be marked. For example, if the wife completes the questionnaire for her husband by answering the majority of questions herself, staff should mark that this was completed by the spouse.

During the clinic visit, staff should confirm that the participant completed the questionnaire themselves. If the participant indicates that they didn't complete the questionnaire themselves, staff should probe to determine who provided the answers for most of the questions.
