

Follow-up Time Documentation

For each participant, we calculated the overall follow-up time for each visit with the variable name V#FOLALL:

Follow-up time (in days) = last contact date – visit date.

For example, the overall follow-up time since visit 2 is V2FOLALL.

The last contact date is based on the latest date of the following: clinic visit date, postcard date, date of death (if participant is deceased) or termination date (if participant was terminated from the study).
