

**V1DEATH****V1DTHCVD****V1DTHBC****Mortality Data Endpoints Documentation**

Four clinics individually collect SOF Mortality data. In order to adjudicate all SOF deaths, along with relevant medical records, it is imperative that a State Registered Certificate of Death also be submitted to the Coordinating Center. The Principal Investigator at the clinical site indicates his/her initial diagnosis for cause of death before all materials are sent to the Coordinating Center for pre- and final adjudication. Using the International Classification of Diseases 9th Revision Clinical Modification (ICD-9-CM), the Endpoints Specialist at the Coordinating Center classifies each cause-specific death.

The classified cause-specific data are coded with four possible values: 1 = death, 0 = no death, .D = death from other cause, and .N = no visit.

An explication of variable classification using ICD-9-CM codes for SOF Mortality is seen below:
