

## STUDY OF OSTEOPOROTIC FRACTURES

### Review of Visit 4 Clinic Self-Administered Questionnaire

#### **I. Social Network and Support**

This questionnaire is relatively straight forward and should be familiar to the participants.

**Q2. How many relatives do you see or hear from at least once a month? (Include children, in-laws, etc.)**

For this question, we do not include the spouse. We do, however, include children or other family members, even if they live with the participant.

#### **II. Mood in the past week**

These questions should be answered in reference to mood in the past week.

#### **III. Key Life Events**

Major events in one's life can sometimes have strong affects on one's physical and mental being. By finding out what important events have occurred in the participant's life and how they felt about them - either positively or negatively, we can get an idea of the emotional stress that they may be experiencing or have had to deal with in their life.

**Q28.** These 'other' important events can be anything that the participant feels is important to her and worth reporting.
