DOCUMENTATION FOR THE PUBLIC-USE SWAN VISIT 02 DATASET

1. Who is included in the public use dataset:

The dataset contains follow-up visit 02 information for the subset of the original cohort still participating in the SWAN longitudinal study from the seven clinical sites. The sites include Boston, MA, Pittsburgh, PA, Oakland and Los Angeles, CA, Detroit, MI, Newark, NJ, and Chicago, IL.

2. How this codebook is constructed:

Following this documentation section are copies of each of the questionnaires that were used at visit 2. A list of additional variables is also provided. The questionnaires include the variables available for public use next to the question in bold red uppercase underlined letters. Those variables not available for public use have a # before the variable and are in blue. Any special notes are indicated with footnotes at the bottom of the page.

The assigned participant ID has been replaced with a randomly generated ARCHID in order to protect participant privacy. The *baseline* interview date is denoted as day 0 and is used as the basis for all other dates. All other questionnaires or data collected that have a date attached have been converted to the number of days from the baseline interview. For example, if the Visit 2 Self-Administered Questionnaire Part A was collected two years after the baseline interview, the day for the Self-Administered Part A would be day 730 and the Baseline Interview would be day 0.

All variables for visit 2 have a 2 at the end of the variable name.

3. Missing data coding:

Original missing codes (-1: not applicable, -7: refused, -8: don't know, -9: missing) have been recoded to SAS missing codes (B: not applicable, .D: refused, .C: don't know, and .A: missing).

4. Ways this data can be used and additional notes

Interview Questionnaire

An osteoporosis variable was created based on text fields in the other prescription medication questions. In general, most 'Other, specify' text fields are not included in the dataset.

- A social support score can be calculated from the questions in C.9.a-d after recoding them from a 1-5 range to a 0-4 range.
- CES-D scores can be created from the questions in C.11.
- A perceived stress score can be created from questions in C.10.
- The flag FLGINTV2 is set for the five participants who completed the interview after the 01/31/2000 cutoff.

Self-Administered Questionnaire Part A

- In general, any 'Other, specify' text field is not included in the dataset.
- The income question I.1 was condensed into a dichotomous variable (THPPOV1) representing above/below the 200% poverty threshold. Poverty was defined using the US Census Bureau's "Poverty thresholds by Size of Family and Number of Children: 1995" and incorporates family size. To stay consistent with previous SWAN papers using income data, the lower level of each income category reported in the original income question was used as threshold.
- The health services needed specify text fields under section B.7a (HLTHSV12, HLTHSV22, HLTHSV32) were categorized by type of service and included as HLSCAT12, HLSCAT22, and HLSCAT32.
- Current smoking is defined as anyone who answered 'yes' to question B.8 (SMOKERE2) and an answer greater than 0 for B.8.a (AVGCIGDA2).
- SF-36 scores can be derived based on questions B.14-20 according to the SF-36 User's Manual. Responses may need to be reversed where necessary so that all items are positively scored, so that a higher value indicates better functioning. The Role-Physical scale uses the variables from question B.14a-d. The Bodily Pain Score is calculated from questions B.17 and B.18. Item recoding depends on whether both questions were answered or

one of the items has missing data. After recoding, all the items are positively scored so that a higher score indicates less pain. The SF-36 Vitality Score is calculated from questions B.19a-d. Questions B.19.a and B.19.b should be reversed so that all items are positively scored; for the resulting index a higher score indicates greater energy (and less fatigue). The Social Functioning Score is calculated using questions B.16 and B.20. Question B.16 is reversed so that all items are positively scored; for the resulting index a higher score indicates better social functioning. The Role-Emotional Score is calculated using questions B.15a-c. All items are positively scored, so a higher score indicates better role-emotional functioning.

- The flag FLGSAAV2 is set for the four participants who completed the interview after the 01/31/2000 cutoff.

Self-Administered Questionnaire Part B

The flag FLGSABV2 is set for the four participants who completed the interview after the 01/31/2000 cutoff.

Physical Measures

In addition to the variables on the form, BMI2 was also calculated as weight in kilograms divided by the square of height in meters.

Additional Measures

Additional variables

A variable describing the race/ethnicity of participants (RACE) and study site (SITE) were added from the Screener dataset. See the Additional Measures section at the end of the codebook for descriptions.

Date of completion variables (INTDAY2, SAADAY2, SABDAY2, SACDAY2, PHYDAY2, HRMDAY2, SPEDAY2, and HYSTDAY2) are given in days from interview date at baseline. Note that for 5 participants, interview completion dates at baseline were not available and alternative dates were substituted either from the Self-Administered Questionnaire-A or Physical Measures completion dates at baseline.

Serum Hormone Measures

The Visit 2 hormone results are included. Of special note is that the estradiol assay was run in duplicate. The average (E2AVE2) is the within-person arithmetic average of the two assays. A flag indicates if the estradiol results differed by > 10 pg/mL where one or both results <= 20 pg/mL. Hormone results below the lower level of detection (LLD - see table in the Additional Measures section) were recoded to an .L value. Note that neither estradiol measurement nor FSH had any values below the LLD.

Longitudinal Measures

Please note that additional study measures are provided in separate longitudinal datasets. These datasets include: Menopausal Status, Bone Mineral Density, Medication Drug Groups, and Vitamin D.

This questionnaire covers material that is sensitive and personal. For some women, sexual activity is an important part of their lives, but for others, it is not. Everyone has different ideas on this subject. To help us understand how these matters affect women's lives and health, we would like you to answer the following questions from your own personal viewpoint. There are no right or wrong answers. Remember, confidentiality is assured. While we hope you are willing to answer all of the questions, if there are questions you would prefer not to answer, you are free to skip them. Please find the most appropriate response to each question, and circle the number for the answer you choose.

B1. How important is sex in your life? (CIRCLE ONE NUMBER) **IMPORSE2**

1	2	3	4	5
Extremely Important	Quite Important	Moderately Important	Not Very Important	Not At All Important

B2. During the past 6 months, how often have you felt a desire to engage in any form of sexual activity, either alone or with a partner? (CIRCLE ONE NUMBER) **DESIRSE2**

1	2	3	4	5

ADDITIONAL MEASURES COLLECTED

The following measures that were collected at Visit 02 have been included in the codebook:

SERUM HORMONE MEASURES

1. Variables for assays

<i>Variable</i>	<i>Assay</i>	<i>Units</i>
<u>DHAS2</u>	Dehydroepiandrosterone sulfate	ug/dL
<u>E2AVE2*</u>	Estradiol (see important note below)	pg/mL
<u>FSH2</u>	Follicle-stimulating hormone	mIU/mL
<u>SHBG2</u>	Sex hormone-binding globulin	nM
<u>T2</u>	Testosterone	ng/dL

*** IMPORTANT NOTE: There were originally two estradiol result variables because estradiol was run in duplicate. E2AVE2 is the within-person arithmetic average of the two estradiol variables.**

2. Flags and other variables

<i>Variable</i>	<i>Meaning</i>	<i>Codes</i>
<u>CYCDAY2</u>	Day of cycle	n/a
<u>FLGCV2</u>	Both Estradiol results are > 20 pg/mL and the within-subject coefficient of variation (CV) is > 15%.	0=no, 1=yes
<u>FLGDIF2</u>	One or both Estradiol results ≤ 20 pg/mL and the difference between them is > 10 pg/mL. Note: Differences were found between some of the Estradiol duplicate measurements. The following guidelines were decided upon: <ol style="list-style-type: none"> 1. If both E2 values > 20 pg/ml, CV must be ≤ 15%. 2. If one or both E2 ≤ 20 pg/ml, the two E2 results must agree within 10 pg/ml. <p>DATA WITH THESE FLAGS SHOULD BE OMITTED FROM DATA ANALYSES, OR USED WITH CAUTION IF INCLUDED IN ANALYSES.</p>	

*1=yes means flagged

3. Changes to the data:

Lower limit of detection (LLD). Hormone results below the LLD were recoded to a value of '.L'.

LLDs changed over time. The following LLDs were provided by the lab and applied to all samples:

Hormone	Time Window on hormone measurement corresponding to LLD	Lower Limit of Detection
