

**CROSS-SECTIONAL  
SCREENER CODEBOOK  
LIMITED USE DATA FILE**

**ARCHIVED DATASET 2018**

**Women Screened by 12/1/97**

## **1. Who is included in the public use dataset:**

The dataset contains information from 16,131 women who responded to the SWAN cross-sectional screening interview during the period from 11/1/1995 through 12/1/1997 from the 7 clinical sites participating in the SWAN longitudinal study. The sites include Boston, MA, Pittsburgh, PA, Oakland and Los Angeles, CA, Detroit, MI, Newark, NJ and Chicago, IL. This dataset excluded one woman from the Pittsburgh, PA site whose age exceeded the eligibility criteria and twelve women from the New Jersey site who did not participate in the screener.

## **2. Changes made to ensure standard coding:**

Some changes to the data received from sites were necessary to assure standard coding across sites. Since standard missing codes were not yet implemented at all sites, any variable coded less than or equal to 0 was set to missing in the SAS data set (i.e., "." in SAS). The exceptions to this rule were:

- Psychosocial variables (Q19-26) for which the code -8 = Don't Know was retained (i.e., -8 was not set to missing);
- Five variables for which "0" was a valid code (Q9.2, 18, 23, 26, 28) - "0" was retained (i.e., "0" was not set to missing).

Original missing codes (-1: not applicable, -7: refused, -8: don't know, -9: missing) have been recoded to SAS missing codes (.B: not applicable, .D: refused, .C: don't know, and .A: missing).

Coding for two skip patterns also was corrected. First, Q9.2 (*How many cigarettes, on average do you smoke per day now?*) should have been skipped by all participants who said "NO" to Q9 or Q9.1; Q9.2 was set to missing for all non-smokers. Second, Q17 (*In the past 3 months, have you taken any female hormones, including birth control pills*) should have been skipped by all participants who said "NO" to both Q15 and Q16; Q17 was set to missing for all hormone non-users.

Coding for the Medical Outcomes Study Short Form (SF36PF) physical functioning questions was corrected. If the participant responded "No" to Q.5., "*Are you limited in any way in your activities because of any impairments or health problems?*", then the questions for 5.1a-5.1j were coded as -1 "Not Applicable".

The assigned participant ID has been replaced with a randomly generated SCREENID in order to protect participant privacy. The 3,302 participants who continued past the screening visit into the study also have a separate, randomly assigned, ID variable (ARCHID) that is consistent across study visits.

Race/Ethnicity (RACE) was condensed into the following categories:

- 1: Black/African American
- 2: Chinese/Chinese American
- 3: Japanese/Japanese American
- 4: Caucasian/White Non-Hispanic
- 5: Hispanic.

Participant study site is provided from the Screener dataset, coded as:

- 11= Detroit, MI
- 12= Boston, MA
- 13= Chicago, IL
- 14= Oakland, CA
- 15= Los Angeles, CA
- 16= Newark, NJ
- 17= Pittsburgh, PA

**3. Created variables:** Some key standard variables anticipated to be needed for many analyses were created.

- AGE: rounded down to nearest year
- Months since last menstrual period (LMPMOS) was calculated from the month, day, and year of the last menstrual period (LMP). For women who remembered the month and year but not the day, 15 was imputed for the missing day (except in 6 cases where the last day of the month was imputed to make the LMP date less than 3 months before the screener date). These cases are flagged (indicated by the variable MEN\_FLAG) so that they may be set to missing in a particular analysis if this imputation is deemed inappropriate. The number of months since LMP was calculated from LMP date and Screener II completion date. Note that LMP date was collected only for those women who said they had had a menstrual period in the last three months.
- Menopausal status (STATUS) was coded as:
  - 2: if the participant had not had a menstrual period in the past 12 months (Natural Post)
  - 3: if the participant had bleeding in the preceding 12 but not the preceding 3 months (Late Perimenopausal)
  - 4: if the participant had had a menstrual period in the past 3 months and had experienced irregularity (from Q13) (Early Perimenopausal)
  - 5: if the participant had had a menstrual period in the past 3 months and had not experienced irregularity (Premenopausal)
  - 7: if the participant had experienced bleeding in the past 12 months and had used reproductive hormones in the past 3 months (Undetermined due to HT use). Menopause status is undetermined for recent hormone users reporting bleeding in the past 12 months because the bleeding may have been due to either the hormone use or to natural bleeding patterns.  
Menopause status was set to missing for women who reported 12+ months of amenorrhea and said that their periods had stopped because of medication, pregnancy, or severe weight loss. Menopause status was also set to missing for women who had either a hysterectomy (Q11a) and/or oophorectomy (Q11b) because a positive answer to either surgical question caused the last menstrual period questions (Q12-14) to be skipped, so a determination of Post prior to surgery was not available.
- Ever-use of reproductive hormones (HORMEVER) was derived from Q15-16.
- Use of reproductive hormones in the past 3 months (HORM3) was calculated from Q15-17; while Q17 (HORM\_3) is skipped for never-users of hormones, HORM3 is coded as 0 (NO) for all non-users.
- The average number of cigarettes currently smoked per day (NUM\_CIG) was created from questions 9, 9.1, and 9.2, and was coded 0 for all those not currently smoking (the 0's include those who never smoked, those who smoked only in the past, plus a few current smokers who indicated an average consumption of 0 cigarettes per day).
- A 5-category education variable (DEGREE) was created from question 28, and indicates
  - 1: Less than High School
  - 2: High school only
  - 3: Some College/Technical School
  - 4: College degree
  - 5: Post Graduate Education

- Body mass index (BMI) was calculated from metric height and weight measures.
- Weight groups in 5 kilogram intervals (WTKGGP) was created. The lower tail of the distribution was collapsed using the cut point of less than 40 kilograms and the upper tail of the distribution was collapsed using the cut point of greater than or equal to 166 kilograms.
- Reported Age at Hysterectomy (AGE\_R\_HYST) was created by taking the reported year of birth and subtracting it from the reported year of hysterectomy. In addition, the lower tail of the distribution was collapsed using the cut point of less than or equal to 20 years of age.
- Reported Age at Oophorectomy (AGE\_R\_OOPH) was created by taking the reported year of birth and subtracting it from the reported year of oophorectomy. In addition, the lower tail of the distribution was collapsed using the cut point of less than or equal to 20 year of age.
- Reported Age at Last Menstrual Period (AGE\_R\_LMP) was created by taking the reported year of birth and subtracting it from the reported year of the last menstrual period. Note that this question was asked only of participants who had reported no menstrual period in the last 12 months. The variable LMPMOS calculates the number of months since last menstrual period for those women who reported bleeding within the past 3 months.
- Marital Group (MARITALGP) was created from Q31, combining separated and divorced into category 3.
- Number of Children (NUMCHILD) was created from Q18. The upper tail of the distribution was collapsed using the cut point of greater than or equal to 5 children.

## SECTION B

First, I would like to ask some questions about your general health and aspects of your daily life.

1. Would you say your health in general is excellent, very good, good, fair or poor?

**HEALTH**

1. EXCELLENT
2. VERY GOOD
3. GOOD
4. FAIR
5. POOR
- 8. DK
- 7. REFUSED

2. About how long has it been since you last visited a doctor, nurse practitioner, or other health care provider for a routine health check-up?

**LVISIT**

1. WITHIN THE PAST YEAR
2. AT LEAST 1 BUT LESS THAN 3 YEARS AGO
3. 3-5 YEARS AGO
4. MORE THAN 5 YEARS AGO
5. NEVER
- 8. DK
- 7. REFUSED

3. Has a doctor, nurse practitioner or other health care provider ever told you that you had:  
 [ IF YES: Are you currently taking medication for this condition?]
